Summary

Software Engineer with hands-on experience in Cybersecurity and Web Development. Passionate about building secure applications, implementing authentication mechanism

Education

PCET's Pimpri Chinchwad University, B.Tech in Computer Science Engineering 08/2023 - Present

- Relevant Coursework: Computer Networks, DSA,Operating Systems, Cybersecurity Fundamental.

Projects

StockStage – secure Stock Analysis & Tracking Platform

- Developed a stock tracking and analysis platform with secure user authentication and role-based access control.
- Automated stock data processing and visualization, improving decision making speed by ~40%.
- Implemented secure backend logic to protect financial data, reducing unauthorized access risk by ~60%

File Integrity Monitoring System

- Developed a Python-based File Integrity Monitoring (FIM) system using cryptographic hash comparison to detect unauthorized file modification or deletion.
- Created a trusted baseline of files, improving tamper detection accuracy by ~90%.
- Reduced manual security checks by ~70% through automated integrity validation

Linguzaee – AI-Powered Language Learning Platform

- Developed an AI-driven language learning platform to assist users with real-time language translation.
- Improved user engagement by ~35% through interactive and personalized language responses.
- Integrated backend logic to handle user requests efficiently, reducing response latency by ~30%.
- Designed the system to be scalable and secure for multi-user access.

Skills

Languages: C, JavaScript, Python, Java.

Technologies: Express.js, Next.js, React.js, MongoDB, AWS, Git, OWASP.

Achievements

- Awarded for Outstanding Creativity – Smart Air Monitoring System (PCET's Pimpri Chinchwad University)
- AVINYA 3.0 Hackathon – JSPM's RSCOE Developed AI Interview Simulation Module

Certificates

- Red Hat Java Developer
- Cybersecurity Certification – Coursera
- Python Bootcamp – Udemy
- Java Mastery Course – Udemy
